

**Think****Community Pharmacy Consultation Service**

When a patient requests an appointment ***“Think Pharmacy, think CPCS”***  
The CPCS offers patients a same-day consultation with a local community pharmacist.

Around 40 minor conditions can be routed into the CPCS service, from insect bites to back aches and strains, providing a convenient new appointment option for patients and for reception teams.

The evidence shows only 10% of CPCS patients need to be referred back to see a doctor for example if the pharmacist identifies a red flag issue, which is reassuring.

***Think Pharmacy think CPCS!***
